Patent No. US20020132237a1
GENERAL INFORMATION:
APPLICANT: Jones, Robert
APPLICANT: Jones, Robert
TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR THE THERAPY
TITLE OF INVENTION: AND DIAGNOSIS OF OVARIAN CANCER
FILE REFERENCE: 210121.497
CURRENT APPLICATION NUMBER: US/09/867,701
CURRENT FILING DATE: 2001-05-29
NUMBER OF SEC ID NOS: 10912
SOFTWARE: FastSEQ for Windows Version 4.0
                                                                                                                                                                                                                                                                                435

Sequence 7902, Application US/09878574

Patent No. U520020110548A1

GENERAL INFORMATION:
APPLICANT: Byrum, Joseph R.
APPLICANT: La Rosa, Thomas J.
APPLICANT: Thompson, Michael D.
TITLE OF INVENTION: Nucleic Acid Molecules and Other Molecules Associated with
TITLE OF INVENTION: Plants
TITLE OF INVENTION: U15401)B
CURRENT APPLICATION NUMBER: US/09/878,574

CURRENT FILING DATE: 2001-12-21
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            2172 AAATCATGAAACAACTAATCTGTCAATACAGCAAAAACGGCATGGGAGGTAAAAACATG 2231

OM protein - protein search, using sw model

Run on: December 16, 2002, 19:36:15; Search time 257 Seconds

(without alignments)
124.189 Million cell updates/sec

Title:
Berfect score: 1772
Sequence: 1772
Sequence: 1772
Sequence: 1772
Sequence: 1772
Searched: 283224 seqs, 96134422 residues

Total number of hits satisfying chosen parameters: 283224

Minimum DB seq length: 200000000
Maximum DB seq length: 200000000
Post-processing: Minimum Match 100%
Listing first 45 summaries
```

                                                                                                                                                                                                                                                                                                        Mol. Ceil 5:865-876(2000).

-!- FUNCTION: Protease that catalyzes two essential functions in the SUMO pathway: processing of full-length SWT3 to its mature form and deconjugation of SWT3 from targeted proteins. Has an essential role in the G2/M phase of the cell cycle.
-!- SIMILARITY: BELONGS TO PEPTIDASE FAMILY C48.
                                                                                                                                                                          X-RAY CRYSTALLOGRAPHY (1.6 ANGSTROMS) OF 401-621 IN COMPLEX WITH SMT3 MEDLINE-20337970; Pubmed-10882122;

Nature 409:1007-1011(2001).

-!- 609:1007-1011(2001).

-!- FUNCTION: THIS PROTEIN CATALYZES THE FORMATION OF PHOSPHODIESTER
LINKAGES BETWEEN 5'-PHOSPHORYL AND 3'-HUDROXYL GROUPS IN DOUBLE-
STRANDED DNA USING NAD AS A COENZYME AND AS THE ENERGY SOURCE FOR
THE REACTION. IT IS ESSENTIAL FOR DNA REPLICATION AND REPAIR OF
DAMAGED DNA, EDY SIMILARITY).

-!- CATALYTIC ACTIVITY: NADH(+) + (deoxytibonucleotide)(N) +
(deoxytibopucleotide)(M) = AMP + nicotinamide nucleotide +
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Cole S.T., Eiglmeier K., Parkhill J., James K.D., Thomson N.R., Wheeler P.R., Honore N., Garnier T., Churcher C., Harris D., Mungall K., Basham D., Brown D., Chillingworth T., Connor R., Inderes R.M., Devlin K., Duthoy S., Feltwell T., Fraser A., Hamlin N., Murphy L., Oliver K., Quail M.A., Rajandream M.A., Rutherford K.M., Rutter S., Seeger K., Simon S., Simonds M., Skelton J., Squares R., Barrell B.G.;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ŏ
                                                                                                                                                                                                                                                                                                                       This invention describes novel human secreted proteins which are encoded by polynucleotides obtained from fetal brain, adult skin, adult brain, adult thymus and adult aorta cDNA libraries. The adult heart, adult thymus and adult aorta cDNA libraries. The polynucleotides and proteins are predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, cytokine and cell proliferation/differentiation activity, immune stimulating activity, immune stimulating activity, tassue growth activity, activin/inhibin activity, chemotricic/chemokinetic activity, hemostatic and thrombolytic activity, acceptor/ligand activity, and tumor inhibition activity. The invasion suppressor activity, and tumor inhibition activity. The controlleds are also stated to be useful for gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAZ43777-Z43808 represent the polynucleotides described in the invention which encode the proteins represented in AAY50905-Y50947.
                                                                                                                                                                                                                                                    New polynucleotides encoding secreted human proteins, derived from human fetal brain, adult skin, adult brain, adult heart, adult thymus and adult aorta cDNA libraries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     433

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             δ
                                                                                                                                                                                                                                                                                      The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous system diseases, such as localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activinibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, arthritis and inflammation, leukaemias and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             g
                                                                                                                                                                                                                                                                                                                                                                The present sequence encodes a human de-sentrinase (SENP) 3 polypeptide. The specification describes SENP1 and SENP2 polypeptides. The SENP1 gene is found in chromosome 12q13.1 SENP1 is found in the nucleolus, and SENP3 is found in both locations. SENP3 is found in the nucleolus, and SENP3 is found in both locations. SENP polypeptides are sentron-specific proteases that remove sentrin from some sentrinited peptides, but do not affect proteins modified by ubiquitin or NEDDB. SENP polypeptides are used to identify specific modulators of SENP. These modulators are potential anti-proliferative and anti-viral agents such as herpes simplex.1 or cytomegalovirus. SENP polypeptides are used for studying the role of sentrinisation in the biological function of PML, a tumour suppressor implicated in development of acute promyelocytic leukaemia. Fragments of SENP polypucie size used as hybridisation probes and amplification primers for detecting gene expression or preparing mutated sequences.

AAD AAD05492-AAD05564 represent cDNAs corresponding to 22 human secreted protein genes, and AAE01672-AAE01743 represent the proteins they encode. AAE01744-AAE01763 represent human secreted proteins they encode. C AAE01744-AAE01763 represent human secreted proteins and their genes are useful for preventing, the secreted proteins and their genes are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the c.g. genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental abnormalities, haematopoietic disorders, foetal and developmental abnormalities, haematopoietic disorders, foetal and developmental abnormalities, neurological disorders, diseases of the immune system, allergies, neurological disorders, schizophrenia, asthma, allergies, neurological disorders, schizophrenia, asthma, allergies, neurological disorders, schizophrenia, asthma, c.g. parkinson's disease), cognitive disorders, schizophrenia, asthma, allergies, and infections. The proteins can also be used to aid wound disorders, and infections. The proteins can also be used to aid wound contain of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used contained as a food additive or preservative to modify storage properties.

Antibodies specific for a protein of the invention can be used in alsorders imminished by an approximant of priminished with the disorders or engine and an anity of an anity of an anity disminished by anity and anity an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked immunosorbent assay (ELISA). The present sequence represents a human

Ruben SM; Olsen HS, Shi Y, Soppet DR, Komatsoulis G, 

WPI; 2001-316492/33 P-PSDB; AAE01682 Isolated nucleic acid molecule encoding a human secreted protein is used in preventing, treating or ameliorating a medical condition

Claim 1; Page 417-418; 540pp; English.

AAD05492-AAD05564 represent CDNAs corresponding to 22 human secreted protein genes, and AAE01672-AAE01743 represent the proteins they encode.

CC AAE01744-AAE01163 represent human secreted protein fragments or variants.

CT he secreted proteins and their genes are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy.

CC rameliorating medical conditions, e.g., by protein or gene therapy.

CC pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 22 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental abnormalities, haematopoietic disorders, diseases of the immune system, AIDS, autoimmune diseases (e.g., rheumatond arthritis), inflammation, allergies, neurological disorders schizophrenia, asthma, skin disorders (e.g., Alzheimer's disease, Parkinson's disease), cognitive disorders, diabetes, atherosclerosis, cardiovascular disorders, angiogenic disorders, idney disorders, apatrointestinal disorders, pregnancy related disorders, and infections. The proteins can also be used to aid wound healing and epithelial cell collections and also before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their cognite ligands or binding present sequence represents a human secreted protein-encoding cDNA of partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties. Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked immunosorbent assay (ELISA). invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ŏ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM36642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system, such as peripheral nervous system diseases, such as localised neuropathies and central nervous system diseases, such as lateral sclerosis, and Shy-Drager Syndrome. Other uses include the lateral sclerosis, and Shy-Drager Syndrome. Other uses include the Activino of the activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, chemotactic/chemokinetic activity, haemostatic assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         C.N.S disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system diseases, such as localised neuropathies and central nervous system diseases, such as Alzhelmer's, Parkinson's disease, Huntington's disease, amyotrophic utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemotactic and thrombolytic activity, cancer diagnosis and therapy, drug screening, as assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                the printed

The Inventor Leadure Do 247,0 moves insurant ovariation and also encompasses polypeptides 90% identical and polynucleotides 95% identical compasses polypeptides 90% identical and polynucleotides 95% identical compasses polypeptides 90% identical and polynucleotides 95% identical recombinant vectors and host cells comprising human ovarian antigen crecombinant vectors and host cells comprising human ovarian antigen polynucleotides and polypeptides in diagnosing, treating, prognosing or preventing various ovary and/or breast related disorders. Such conditions include ovarian cancer and breast cancer, and disorders (e.g., infertility, disorders of pregnancy, anovulation, polycystic ovary syndrome, ovarian orysts, and dysmenorrhoea), endocrine disorders, infertility, disorders of pregnancy, and toxic conjuctories, infertility, disorders of pregnancy, and toxic conjuctories, infertility, disorders of pregnancy, and toxic conjuctories, infertility, disorders (e.g., congenital and acquired incorders, infertility, immune disorders (e.g., congenital and acquired incorders, cophorities, systemic lupus erythematosus, blood-related disorders (e.g., anaemia), cardiovascular disorders, cophorities and urinary system disorders. Ovarian antigen polypeptides and polymerleotides may also be used in screening for compounds which modulate ovarian antigen expression or activity. The polymucleotides may also the used in screening for compounds which modulate ovarian antigen expression or activity. The polymucleotides may also the used for gene therapy, chromosome mapping, in the identification of individuals and in forensic analysis, and the

```
The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynuclectides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression,

The present invention describes primer sets for synthesising 5602

(ull-length cDNAs defined in the specification. Where a primer set
comprises: (a) an oligo-dT primer and an oligounclectide complementary
to the complementary strand of a polynuclectide which comprises one of
the 5602 nucleotide sequences defined in the specification, where the
coligonucleotide comprising a sequence complementary to the
complementary strand of a polynucleotide which comprises a 5'-end
sequence and an oligonucleotide comprises a 3'-end sequence complementary to a
polynucleotide which comprises a 3'-end sequence complementary to a
polynucleotide which comprises a 3'-end sequence therefore the 5'-end sequence/3'-end sequence is selected from those defined in
the 5y-end sequence/3'-end sequence is selected from those defined in
the specification. The primer sets can be used in antisense therapy and
in gene therapy. The primers are useful for synthesising polynucleotides,
particularly full-length cDNAs. The primers are also useful for the
detection and/or diagnosis of the abnormality of the proteins encoded by
che full-length cDNAs. The primers allow obtaining of the full-length
cDNAs easily without any specialised methods. AAH13638 and
AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to
                                                                                                                                                                                                                                                                                                                                                                                                     primer; detection; diagnosis; antisense therapy; gene therapy; ss.
                                                                                                Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ij

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to novel genes (AAI93926-AAI97963) expressed in human neuroblastoma. The nucleic acids are applicable as a probe or primer in diagnosing the prognosis of human neuroblastoma, malignancy and susceptibility indicators or tumour markers for anti-cancer agents. The gene information for diagnosing prognosis is related to factors similar
